

IRON GIS TECH AMERICA

LET'S DO MORE WITH LESS

FREE Half-day workshop to learn how to build your own GPS-enabled solution for collecting data in the field.

Earth Vector Systems and Trimble have invited the **Iron GIS Techs** for a half day workshop to demonstrate how your company can build mobile solutions that will **save your projects time and money**. No longer will you have to depend on off-the-shelf software that doesn't exactly fit your needs in the office or field.

This interactive workshop is specifically targeted to companies interested in building their own flexible and easy to use field applications and/or for their customers without having to build them from the ground up.

The Iron GIS Techs will demonstrate:

- How to **easily build and configure your field applications using CartoPac Studio**—NO development or programming required
- **Integration options**, including the ESRI's ArcMap, ArcSDE, ArcGIS Server, or a "stand alone" web-based deployment solution outside of an enterprise GIS
- How to **integrate your field applications** with new or existing data models
- Utilize **CartoPac Forms Builder** for easy to use, customizable forms and templates
- How to **build a web-based interface** for rapid deployment

Breakfast & lunch are included at no cost, we hope you can join us!

Registration is required. Contact Earth Vector Systems to reserve your place today and for full workshop details at (800) 887-8445 or email Patti at: patti_kater@evsgps.com. Registration deadline is June 22, 2009.

Why Attend

- Learn how CartoPac enables rapid configuration and deployment of field data collection projects
- This workshop is focused on easy to use technology with an high ROI
- Let us prove to you that CartoPac will make your field data collection more productive and efficient

Who Should Attend

- Anyone involved with collecting, managing, or maintaining data collected in the field
- Everyone from Upper Management to the Field or GIS Technician (regardless of experience)

Date

June 30, 2009
